What ?

A descaling powder to remove scale and rust internally in water systems. Sulphamic acid based, safe in chlorinated systems.

When and where?

This safe acid powder is for descaling chlorinated water systems such as piping, heaters, tanks, cooling systems, water makers, boilers etc.

How?

Mix safe powder in water up to 24% (saturation) depending on level of scale and time allowed to contact. Normally start with 10% mix and work from there. Let soak, circulation improves effect. Flush with potable water after use to neutralize pH

Why?

- Safe for use in chlorinated systems
- Improved heat exchange
- Improve flow
- Treat brown water problems
