### What ?

Sodium hypochlorite NaOCl 10% (Chlorine) in water for sanitation and disinfection, controlling unwanted transfer of bio-organisms.

### When and where?

Controlling ballast water bacteria and micro organisms. Remove stains and odour in holds, and any other area. Any application that requires Sodium Hypochlorite (Chlorine) solution. In waste water treatment as described in procedure.

### How?

Use as ascribed in ships ballast water management plan and IMP regulations for ballast water. For hold stain cleaning apply by brush, spray soak etc and let soak for 10-20 min without drying, flush with fresh water. For cleaning and sanitation use neat or diluted as appropriate. Ensure adequate ventilation and flushing after use.

### Why?

- IMO, MARPOL and USCG compliance
- Responsible environmental care
- Ensure sanitation
- Clean fouled equipment
